## SUMMARY

Business Intelligence Developer with 2.5 years delivering the full Microsoft BI stack for a commercial insurance carrier — SSIS ETL, T-SQL stored procedures, SSRS reporting on SharePoint, and Power BI with DAX. Turn raw Excel and flat-file feeds into validated warehouse tables and the parameterized reports finance and underwriting run on, with row-count and sum reconciliation built into every load. Microsoft Azure Data Fundamentals (DP-900) in progress.

## TECHNICAL SKILLS

|                               |                                                                                                               |
|-------------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>Data &amp; ETL</b>         | Microsoft SQL Server, T-SQL, Stored Procedures, SSIS, SSMS, Data Warehousing, Source-to-Target Reconciliation |
| <b>Reporting &amp; BI</b>     | SSRS (parameters, subreports, drill-through), Power BI, DAX, Power Query, SharePoint deployment, Excel / VBA  |
| <b>Cloud &amp; Automation</b> | Azure Data Fundamentals (DP-900, in progress), Power Automate, Power Apps, SQL Agent scheduling               |
| <b>Programming</b>            | SQL, Python, C#, JavaScript / TypeScript, Java, R                                                             |
| <b>App Development</b>        | ASP.NET MVC, Angular, React, Node.js, REST APIs, MongoDB, HTML/CSS                                            |
| <b>Tools &amp; Practices</b>  | Visual Studio, SSDT, Git/GitHub, Agile, AI-assisted development (Claude / LLM APIs)                           |

## PROFESSIONAL EXPERIENCE

**W. R. Berkley Corporation**  
*Business Intelligence Developer (Technical Operations Associate)*

**Stamford, CT (Remote)**  
**Sep 2024 – Present**

- Build SSIS packages loading Excel and delimited text feeds into SQL Server, using Foreach Loop containers to process an entire file directory in one package and expression-driven variables to resolve file names from the selected reporting date.
- Write T-SQL stored procedures that stage and pre-calculate source data before load, keeping premium, loss and reserve logic in version-controlled SQL instead of buried in package data flows.
- Built row-count and column-sum reconciliation into every load, failing the package on any source-to-destination mismatch and catching truncated or duplicated files before they reach reporting.
- Delivered 8 production SSRS reports replacing manually maintained Excel deliverables — date and division parameters, multi-level subreports, drill-through detail rows and year-to-date aggregation — deployed and secured on SharePoint.
- Translate insurance formulas from business-owned workbooks into stored procedures and complex T-SQL so every reported figure ties back to source.
- Model data in Power BI and author DAX measures (time intelligence, ratio and YTD calculations) for self-service access to the same governed datasets.

**Berkley Custom Insurance Managers (a Berkley Company)**  
*Technical Operations Intern*

**Stamford, CT (Remote)**  
**May 2024 – Sep 2024**

- Built a Power Apps + Power Automate application that takes user input, pulls matching records from the database, writes them to Excel, stores the file in SharePoint and emails it — replacing a recurring manual pull.
- Developed C# / ASP.NET MVC web portals moving data between internal systems and the data warehouse, including an accounting portal for on-demand retrieval of automated journal entries.
- Improved the SQL and SSIS loading processes behind corporate dashboard compilation and IBNR (incurred but not reported) calculations.
- Produced Power BI reports using measures, slicers and parameters, and automated recurring Excel workflows with VBA.

**MindStaq**  
*Frontend Developer Intern*

**Remote**  
**Apr 2024 – Jun 2024**

- Built Angular and TypeScript interface features in an Agile team under senior developer review, contributing to code reviews and QA.

## SELECTED PROJECTS — SELF-DIRECTED DATA & AUTOMATION SYSTEMS

**Market Catalyst Detection & Trading Bot** — Python service running on a DigitalOcean host that ingests real-time financial news, scores catalysts through a layered filter (400+ regex rules plus an LLM classifier), and routes alerts to Discord and an Interactive Brokers paper-trading bot. Exit strategy selected by backtesting 50,000+ historical trades against second-level price bars in SQLite.

**Facade Recon — AI Lead Engine** — FastAPI + SQLite + React/Leaflet system that discovers commercial buildings via Google Places, captures Street View imagery, and scores each on condition and job suitability with a Claude vision model, producing a ranked sales pipeline behind a hard API-spend guardrail.

**Business Knowledge Base — LLM Extraction Pipeline** — Pulled 1,100+ transcripts and extracted 660 structured case studies through parallel schema-validated LLM agents, grading each on evidence quality before publishing a searchable static site; built with batched, resumable execution so a multi-million-token job survives interruption.

## EDUCATION & CERTIFICATIONS

**Rutgers, The State University of New Jersey** — B.A., Computer Science | GPA 3.4

**May 2024**

**Certifications:** Microsoft Azure Data Fundamentals (DP-900) — in progress | Prompt Engineering for ChatGPT and Building Custom GPTs, Vanderbilt University

**Languages:** English and Arabic (fluent), French (proficient), Spanish (basic)
